

GRANT DOZIER

STAFF / SENIOR APPLIED AI ENGINEER

Lafayette, LA · (337) 412-4767 · grant@doziertechgroup.com · [GitHub](#) · [Portfolio](#)

PROFILE

Applied AI and platform engineer with 9+ years shipping production software across agent infrastructure, retrieval systems, data platforms, government ERP, and high-stakes operational automation. Founder-level owner who moves from ambiguous domain problem to architecture, implementation, deployment, and measurable outcome. Recent work spans MCP tool ecosystems, human-in-the-loop entity resolution at 22.5M-record scale, governed institutional intelligence, and multimodal document pipelines.

CORE: Applied AI systems · Agent/tool infrastructure · RAG & retrieval · Data/ontology design · Human-in-the-loop workflows · Distributed systems · Production ownership

SELECTED AI & PLATFORM IMPACT

AI Operating Layer — Founder / Principal Engineer. Typed MCP ecosystem connecting agent workflows to engineering, communications, files, structured knowledge, transcription, and business operations; 92-commit repository with 161 tracked files.

ATHENA + HERMES — Founder / Systems Architect. Governed institutional-intelligence products built around provenance, bi-temporal rules, explainable signal paths, cross-domain ontologies, and human-final decisions.

TabX Resolution Platform — Lead Software Engineer. AI-assisted entity resolution and analytics across ~22.5M POS units using deterministic matching, embeddings, model verification, confidence gates, and human review.

Royal Engineering Automation — Founder / Systems Architect. React/.NET/PDF/Excel pipeline processing up to 300 model outputs per upload; reduced multi-week settlement analysis to minutes and documented 95% cycle-time reduction.

EXPERIENCE

- Dozier Tech Group | Founder & Principal Engineer

2025–Present

 - Built a typed Model Context Protocol operating layer spanning 100+ TypeScript source files and integrations across GitHub, Linear, Microsoft 365, Google Drive, Cloudflare R2, transcription, billing, and institutional memory—turning fragmented tools into one governed agent workspace.
 - Designed an autonomous opportunity-intelligence engine that ingests and ranks 933 funding and procurement opportunities across SAM.gov, Grants.gov, Louisiana procurement, DOTD, and health sources; paired discovery with qualification, proposal, and Supabase delivery workflows.
 - Architected RAG and document-intelligence systems for construction operations, connecting email, files, calendars, vendor history, SOPs, and project context; client case study reports 10–20 hours of productive capacity recovered per person per project.
- TabX | Lead Software Engineer

2024–Present

 - Architected an AI-assisted beverage data platform that normalizes and maps approximately 22.5M POS units using deterministic resolution, embeddings, model verification, confidence thresholds, and human review.
 - Owned a polyglot platform across .NET 9, React 19, Python/FastAPI, MCP, SQL Server, and production data workflows; designed the system so uncertain model output is reviewable instead of silently committed.
- MetVero | Founder & Systems Architect

2026–Present

 - Designed ATHENA, a governed institutional-intelligence architecture that unifies fragmented student-success signals into sourced, role-calibrated “decision surfaces” for students, advisors, departments, and leaders.
 - Defined a bi-temporal ontology and risk-reason engine that preserves provenance, counter-evidence, rule versions, uncertainty, and human override—an architectural approach to explainability and accountable AI, not a policy wrapper.
 - Extended the same intelligence core into HERMES for complex sports organizations, modeling cross-domain signals across performance, medical, recruitment, roster, compliance, and commercial systems.
- CGI | Solutions Developer / Transition Co-Lead

2023–2024

 - Co-led transition of government clients onto CGI Advantage ERP, owning custom solution development, environment planning, deployment, QA, performance readiness, documentation, training, and stakeholder coordination.
 - Turned client-specific operational and regulatory requirements into production configurations and repeatable transition practices for large state and local government environments.
- Perficient | Associate Technical Consultant

2020–2022

 - Shipped React tooling for a global software company’s enterprise onboarding organization and delivered real-time technical solutions with customer engineering teams.
 - Migrated and remediated enterprise .NET applications for Azure; built integration/smoke-test automation and Azure DevOps pipelines covering connectivity, authorization, databases, and file services.
- Meyer Technologies | Software Developer

2017–2019

 - Built custom C#, .NET, JavaScript/jQuery, API, data, and automated-test solutions for healthcare, marine transportation, and mobile workflows on a three-person engineering team.

TECHNICAL DEPTH

AI / DATA: MCP, RAG, embeddings, vector search, ChromaDB, pgvector, LLM orchestration, agent memory, evaluation gates, HITL, document intelligence, ontology and provenance design

ENGINEERING: Python, TypeScript, JavaScript, C#, SQL · .NET 9 / ASP.NET Core, FastAPI, Node.js, React · PostgreSQL, SQL Server, SQLite · Azure, Docker, GitHub Actions, Cloudflare R2, Microsoft Graph

EDUCATION & CREDENTIALS

B.S. Computer Science — University of Louisiana at Lafayette, 2019 · Microsoft Azure Fundamentals · Microsoft Data Engineer Associate · CompTIA A+ / Network+
